

Unhandled Constraints:

- Users must be at least 13 years old to create an account.
 - There is no field that tracks the 'Age' of users currently; 'Bdate' is a stored attribute, however, we do not have a system that tracks the current date to determine the age.
- The platform also calculates the playlist's total duration for relevant operations.
 - 'Duration' is a derived attribute which is not stored in the table, so we cannot determine the playlist's total duration.
- The system can calculate the total number of friends a user has, which reflects the connections they make within the service and serves as an indicator of their overall popularity and engagement.
 - There currently isn't a system to add friends which then stores the friend count in the table.
- The number of songs in an album provides useful insight into its scope for the listener, so the platform determines this value by counting all songs linked to the album in the database and displays it as part of the album's details during browsing and playback.
 - 'Number_of_songs' is a derived attribute, which we cannot determine because 'Album' and 'Songs' are linked through the 1:N relationship called 'Belongs_To'.
- The system also lets listeners create up to 6 playlists to curate songs into personalized collections.
 - The 'creates' table is separate from the 'listener table' (because it is a 1:N relationship).
- Listeners must create playlists before adding songs to them, so newly created playlists may not have any songs.
 - The 'creates' table is separate from the 'listener' table (because it is a 1:N relationship). Newly created playlists having no songs cannot be enforced.
- Some playlists may be autogenerated and therefore do not have an associated creator.
 - There is no field which states whether a playlist is autogenerated to determine whether it has an associated creator.
- While most content on the platform is created by a single artist, creators may collaborate with up to 4 other creators to produce content.
 - There is no field showing which creators have collaborated, so we cannot set a max number of collaborators.
- The maximum allowed duration is 10 minutes
 - Song cannot access the length attribute without joining with the content table.
- Podcast episodes may extend up to 60 minutes in length
 - Podcast episodes cannot access the length attribute without joining with the content table.
